1 in 3 Americans have Prediabetes
(higher-than-normal blood glucose levels)

The Association of Diabetes Care & Education Specialists (ADCES) has worked to activate the Centers for Disease Control and Prevention (CDC) National Diabetes Prevention Program (National DPP) within underserved communities through in-person and online delivery modes. Through a 5-year cooperative agreement (DP17-1705), ADCES has been able to increase access and availability to the National DPP lifestyle change program to specific priority populations at high-risk for developing type 2 diabetes.

Enrolling Participants Across the U.S. in CDC-Recognized Lifestyle Change Programs

Reaching individuals in 11 states and 45 counties through in-person delivery

Priority Populations of Focus*

Medicare beneficiaries, Men, African-Americans, Hispanics, American Indians

Through an evidence-based intervention, these hard to reach populations have engaged with trusted members of the community; discussed culturally informed healthy eating, learned stress management strategies, and developed realistic positive health behaviors that can be maintained long-term.
